Source: CMS Monthly Enrollment by Contract/Plan/State/County (August 2026), CY2026 Landscape file (September 2026 update) and 2026 Part C & D Star Ratings. CMS suppresses any contract–plan–county cell with 10 or fewer enrollees; 94.5% of the 3.39 million cells in this file are suppressed. All figures are visible enrollment — the sum of published cells. Suppressed cells count as present but add nothing and are never estimated. Medicare Advantage here means plans the landscape file classifies as MA, MA-PD or SNP; employer-group, PACE, Cost and stand-alone Part D plans are excluded from MA views. Premium is the consolidated Part C + D premium, or the Part C premium for plans without drug coverage; where a plan's premium varies by county or segment, the lowest is shown. Star ratings are 2026 contract-level ratings; stand-alone drug plans receive no overall rating.

MA plans: monthly premium vs. 2026 overall star rating (bubble = visible enrollment)

Premium = consolidated Part C + D, or Part C for plans without drug coverage; lowest segment shown. Bubble size = visible enrollment (cells of 10 or fewer suppressed by CMS).
